### DETAILED ACTION

- (1). Applicants' Amendments and Remarks filed on 7/19/2010 have been received. Claims 1 and 12 are amended. Claims 4, 6-8 and 20 were cancelled before. Consequently, the rejections of claims 1-3, 9-19 in prior Office Action dated 7/19/2010 is withdrawn.

#### *Allowable Subject Matter*

- (2). **Claims 1-3, 5 and 9-19** are allowed.

#### *Reasons for Allowance*

- (3). The following is an examiner's statement of reasons for allowance:

Instant Application in condition of Allowance in view of the current Amendments limiting the component C - a (meth)acrylate to be a reaction product obtained by reacting a **polyether polyol having an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit** with a (meth)acrylic acid in a conductive resin composition such that it overcomes prior arts of the record as per said prior art fail to teach or fairly suggest to use component C as claimed by Applicants.

Closest prior arts of the record – Okumura et al (US 20020055030A1) disclose separator for solid polymer type fuel cell, in that a vinyl ester resin or polyester (meth)acrylate resin is used as component, the polyester (meth)acrylate resin is unsaturated polyester and its oligomer is produced by adjusting the ratio of polybasic acid (in particular, saturated polybasic acid) and polyol. Another low-profile Agent includes polyester-series resins such as saturated aromatic polyester series resins, saturated aliphatic polyester resins, copolymerizable saturated polyester series resins having a polyoxylene unit, acrylic resins (e.g., homo- or copolymers having a C<sub>1-10</sub> alkyl ester of (meth)acrylic acid as a monomer, polyethylene-(meth)acrylic acid copolymer. However, polyether (meth)acrylate ester is unsaturated ester monomer as claimed by Applicants which do not fall into categories of polyester series resin disclosed by Okumura et al (US 20020055030A1). Butler (US 6251308B1) disclose vinyl- ester series resin, but not include the reaction product of polyether (with alicyclic or aromatic structure) polyol and (meth)acrylic acid.

Art Unit: 1797

Hirai et al (US 20020132118A1) disclose urethane (meth)acrylate obtained by reaction of polyether polyol and (meth)acrylate together with diisocyanate compound.

To the end of this discussion, instant claims 1-3, 5, 9-19 are , therefore allowable and passed to issue as date of this Allowability Notice.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
